

GOOD COMBINATION FOR ROUGH AND FINE SANBLASTING

DUOSTAR

#26365

A sandblaster combination for rough cleaning and fine sandblasting: Duostar combines the characteristics of two units in a minimum space – with all the advantages of a microblaster and a recycling sandblaster. The LED technology in the blasting chamber and in the handpiece provide an optimal, shadow-free view during sandblasting and a service life that is up to ten times longer than that of conventional lamps. This ensures that the Duostar is low maintenance and particularly cost-effective. The aim point in the fixed nozzle enables precise positioning of the workpiece – for quick, efficient and material-saving sandblasting.

Technical information

- | | |
|---|-----------------------------|
| • Height [mm] | 590 |
| • Width [mm] | 400 |
| • Depth [mm] | 420 |
| • Air consumption [L/min] | approx. 120 L/min. |
| • Compressed air connection [connection thread] | 4–6 bar (0.4–0.6 MPa), 1/4" |
